

x_make_pip_updates_x â€™ Production Ledger

I record every significant change to this dependency refinery here. Entries follow [Keep a Changelog](#) and Semantic Versioning so upgrade evidence maps cleanly to release history.

[Unreleased]

Fixed

- Sanitised the 2025-10-26 upgrade ledger so the archived `result` payload matches the published schema and keeps historical evidence valid during regression sweeps.

[0.20.4] - 2025-10-15

Changed

- Documented the Kanban propagation column hookup: upgrade ledgers now register with the orchestrator summary and surface in the Road to 0.20.4 evidence trail.
- README refreshed to steer operators toward the new 0.20.4 board cadence and propagation audit expectations.

[0.20.3] - 2025-10-14

Changed

- README and ops guide rewritten to connect upgrade batches to the Road to 0.20.3 JSON audit feed.

[0.20.2] - 2025-10-14

Changed

- Realigned documentation with the Road to 0.20.2 upgrade doctrine, clarifying dependency audit expectations for this release.

[0.20.1] - 2025-10-13

Changed

- Extracted the shared `update_flow` delegate so the orchestrator now pulls one lever for pip governance.
- Rewired the README and release log to point straight at the Road to 0.20.1 control-room ledgerâ€™everyone cooks from the same playbook.

[0.20.0-prep] - 2025-10-12

Added

- Authored control-room styled README and changelog aligning package governance with the Road to 0.20.0 initiative.
- Linked dependency automation to the Change Control hub and publishing pipeline channels.

Changed

- Reinforced the rule: every upgrade gets a documented hash, a compatibility check, and a logged remediation path before release.
